Project Title: BSSE Examination Billing Software

Project Description: BSSE Examination Billing Software is a web-based management system designed to streamline and automate the process of preparing remuneration bills for Institute of Information Technology, University of Dhaka faculty members engaged in various examination-related duties. BSSE Examination Billing Software ensures accuracy, transparency, and efficiency in handling academic compensations.

The system records the details of each faculty member's assigned responsibilities including question paper preparation, moderation, script evaluation, assignment or report evaluation, presentation evaluation and project or thesis supervision etc.

By digitizing a traditionally manual and time-consuming process, BSSE Examination Billing Software aims to simplify administrative workflows, reduce human error, and enhance accountability in faculty payment management bringing elegance and precision to academic administration.

Motivation: In academic institutions like Institute of Information Technology, University of Dhaka, faculty members contribute significantly to examination activities beyond their regular teaching responsibilities including question setting, moderation, invigilation, script evaluation, and project supervision. Despite their importance, the process of preparing remuneration bills for these duties often remains manual, time-consuming, and prone to error.

The Examination Committee Chairman typically collects data through scattered paperwork or spreadsheets, requiring repetitive verification, manual calculation, and administrative oversight. This not only delays payments but also creates inefficiencies and inconsistencies in record-keeping and reporting.

The motivation behind BSSE Examination Billing Software is to modernize and automate this critical administrative workflow. By introducing a centralized digital platform, the project seeks to make faculty remuneration processing accurate, transparent, and effortless.

Project Scope & Features: The system, which is a web-based application, provides secure user login for faculty members and administrators, authenticated through their academic email addresses. Faculty members can conveniently submit details of their examination duties through the platform through a form, which are then reviewed and approved by the Examination Committee Chairman before bill generation. The system automatically produces professionally formatted documentations in PDF format for official use and record-keeping while maintaining a complete history of past bills and activities for future reference and auditing purposes. This software covers the examination duties done on Theory, Lab and SPL courses of Information Technology, University of Dhaka,.

Languages & Technologies:

- Language: Python, Javascript
- Database: MongoDB
- Version control: Github
- IDE & other softwares: VisualStudio Code, Postman
- Testing: Selenium
